

NOUVEL[®]

A Fresh Vision for Modern Surfaces by Bedrosians[®]

Care & Maintenance Guide

General Care

Clean with a soft cloth and mild, pH-neutral cleaner. Avoid abrasive pads or harsh chemicals that may damage the surface.

Protection

Use cutting boards and trivets. Avoid direct heat and dragging heavy or sharp objects across the surface.

Heat Protection: Always use trivets or hot pads. Although resistant, rapid, intense heat can damage the resin.

Surface Advisory

Nouvel surfaces feature a printed design layer protected by a specialized coating. Grinding, sanding, or aggressive polishing may remove this layer and permanently alter the appearance. This damage is irreversible.

Stain Prevention

Clean spills promptly, especially oils, wine, coffee, and acidic substances. Deep scratches or chips cannot be repaired to original appearance.

Print-On Through Body Technology

- **Will the printed design fade?** Avoid prolonged direct sunlight. Apply UV-protective window film where needed to extend surface lifespan.
- **Chemicals to Avoid:**
 - Bleach or bleach-based cleaners
 - Oven cleaners
 - Paint removers
 - Products containing hydrofluoric acid, methylene chloride, or trichloroethylene
 - These substances may etch or discolor the surface. Always test cleaners in a discreet area first.

Care Commitment: By following these recommended care and maintenance guidelines, you will help preserve the long-term beauty, integrity, and performance of your Nouvel surface. Consistent care practices not only protect the advanced printed design layer, but also ensure the surface maintains its intended aesthetic and durability over time. Proper use, cleaning, and protection will significantly extend the life of the material and support its continued performance in both residential and commercial environments.
